### BISMAT® 1000 by Walraven

## The "Whisper Clamps" for Drainage Pipes

### Unmatched low Residue Sound Insulation levels

With the BISMAT® 1000 "whisper clamp", Walraven offers a unique noise insulation solution for drainage pipes. The structure of the clamps produces an unrivalled low residue sound insulation noise. The noise investigations were carried out and documented by the Fraunhofer Institute.

Noise insulation is gaining increasingly in significance in residential construction. Disturbing noises caused by the technical installation in the home often lead to legal disputes. Piping manufacturers now provide the industry with a whole range of noise-insulating drainage pipes.

Unfortunately, the right fixing equipment for this is frequently given too little consideration. A high-quality noise-insulated drainage pipe loses a lot of its effect through unsuitable fixing. However, with the right fixing, it is possible to achieve brilliant and demonstrable residue noise insulation.

The construction of the BISMAT® 1000 "whisper clamp" is based on a simple principle. Two pipe clamps are combined, a batch clamp to guide and fix to the structure and a fixed-point clamp to absorb the pipe's weight.

In comparison to conventional pipe clamps, which carry the pipe weight and are fastened and tightened directly to the structure, there is no connection between the fixed-point clamp and the structure with the BISMAT® 1000.

The fixed-point clamp is only positioned on the batch clamp which means the two pipe clamps have a specially developed and coordinated noise insulation profile.

As the final result, residue noise insulation levels far below the required guidelines are achieved. =Walraven/BfC=
