The Fixing Specialists

Walraven will fix it

Wire anchors and dowels for special applications

Walraven is one of the leading manufacturers of fixing systems and a specialist of fire-protection and sanitary systems. The company slogan is BIS Technology by Walraven. BIS stands for Better Installation Systems. The new dowels and anchors provide simple and rapid use, both for aerated concrete and standard concrete.

Walraven are launching three specialist products for solid foundations into the market, both for aerated concrete and plasterboard. They combine rapid and simple use with high levels of carrying capacity. Each individual piece is designed for special applications and satisfies the highest demands.

The BIS HK/HK-S wire anchors have been developed for solid and hard materials and also support heavy weights. They are manufactured from stainless steel and suitable for outdoor use. They are simply hammered into a pre-drilled eight-millimetre hole. The HK type is designed for BISCLIPS® Gripple No. 1 and No. 2; the HK-S for suspension band up to 25 millimetres in width. Horizontally, the carrying capacity, depending on the foundation, is stated as 100 kilograms for HK. Vertically, the HK manages 80 kilograms and the HK-S 65 kilograms.

The BIS CP® is intended for aerated concrete and plasterboard and aimed at medium-weight uses. The galvanised steel is passivated. The concrete/plasterboard is pre-drilled to eight millimetres, the dowel is hammered in and then screwed down.

Distorting in the wall is no longer an issue. Horizontally, the BIS CP® achieves 40 kilograms and vertically, 75 kilograms.

The BIS TWIST® is used for hollow and solid materials if heavy weights require fixing. The galvanised steel is passivated white. Drill hole, hammer in and screw: using it is so easy. A retaining ring prevents the dowel from falling into the drill hole. There is no more distortion in the wall as the BIS TWIST® remains in position even if the screw is unscrewed. It is intended for metric threads and wood screws. Horizontally, it managed 80 kilograms while saddling 130 vertically. =Walraven/BfC=
