### **New BIS Hammer-in plugs from Walraven**

#### **Firm grip in plasterboard**

#### **Pre-drilling and spreading are no longer required**

**Walraven is one of the leading manufacturers of fixing systems, fire-protection and sanitary systems. BIS, that stands for Better Installation Systems. The new hammer-in plugs for plasterboards offers a lot of flexibility for fixing a huge variety of loads.**

Hammer-in plugs for plasterboard have to meet special requirements. Walraven has launched an elaborate range for a huge variety of loads. They are simple to handle. Pre-drilling is not longer required – simply hit and screw. Spreading tools are not needed. The hammer-in plugs spread out themselves when you insert the screw. And they don't turn in the wall.

The BIS MINI® was developed for light applications of up to ten kilograms. Just 22 millimetres long, it is manufactured as ABS and is blue. With a sharp impact tip, it can be better positioned. The BIS MINI® can also be positioned close to one another.

The BIS GOLD® is suitable for medium-heavy applications with weights of 15 (horizontal) and 30 kilograms (vertical). The hammer-in plug is made of galvanised and passivated steel and equipped with a flat head. The serrated point makes impact easier. Two barbed hooks provide better fixing properties. It can be removed from the wall causing just slight damage.

The BIS TRISTAR® is intended for heavy applications with weights of 25 (horizontal) and 50 kilograms (vertical). The hammer-in plug is made of stainless steel. The screws are made from bi-chromed steel. The serrated point and flat head help to hammer the plug into the plasterboard.

The BIS XL® is the heavy weight among the hammer-in plugs for plasterboard with more than 13 millimetres in thickness. Vertically, it adds another 20 kilograms of support, bringing the total to 70 kilograms. The galvanised steel is passivated. A flat head makes it easier to bang the 43 millimetre long dowel in.=Walraven/BfC=
