New Heavy-Duty Clamps by Walraven

Solid construction for heavy pipes

Can also be used in escape routes

The Walraven Group, international specialist for fixing systems, has overhauled its HD heavy-duty clamp range. Heavy loads and pipes in diameters from 15 to 564 mm can be safely fixed by the solid construction of the clamps. The clamps have verification of their fire protection suitability, meaning they can also be used in escape routes.

Walraven has placed particular importance on the new HD clamps being easy to assemble. Just one connection bolt must be loosened to position the pipe in the clamp. There is enough space between the two halves of the frame to insert the pipe. This makes the pipes easier to assemble. The locking screws are secured with an undetachable retaining washer. The counternuts cannot be removed from their position in a plastic casing. In addition, the HD clamps possess rounded corners and no sharp edges, practically ruling out the risk of injury during assembly.

The galvanised HD clamps are perfectly suited to most installations. The standard selection covers the most frequent assembly uses. They are designed with and without noise insulation inserts (in accordance with DIN 4109). For special applications such as in the food industry, in clarifying plants or tunnel construction, Walraven can provide heavy-duty clamps in stainless steel.

The Thread adaptors, which are available separately, even make it possible to individually adjust the threaded connection.

The BIS fixing system also contains a multitude of other products which can be ideally used in connection with the HD clamp. For example, the universal BIS RapidStrut® system for framework constructions and supports in heavy installations, BIS wall panels and BIS fixed-point fixing systems.
