Versatile Rail Fixing System for all Load Ranges

Every rail fixing system is only as good as its accessories. The more variably they are designed, the more versatile the design options are. The more perfectly they coordinate with one another, the easier and more comfortable planning and assembly are. Ideally, as with the BIS RapidStrut® rail fixing system for heavy loads, "everything comes from one single source".

The high degree of pre-fabrication of the accessoires means that installation times are low. This is achieved through the green plastic springs, which are pre-assembled with screws and nuts to make assembly easier. As a result, there is no need to deal with lots of small parts.

The basic elements for rail construction are rails and cantilever arms, fixing parts, connectors, hammerfix and slid nuts. Such a complete system saves any annoying and laborious searches for the right pieces. With such a "sorted" *construction kit*, planning and assembling pipes becomes imaginative child's play. On request, complete constructions can be supplied, pre-assembled to the building site.

The BIS RapidStrut® system is suitable for all load ranges. All system parts are sendzimir or hot dip galvanised, making them resistant to corrosion. Many system parts are also available in stainless steel. The double rails are welded.
