

Turn down the
volume of buildings

Walraven VibraTek®

Vibration isolators for equipment and systems in buildings

Inspired by smart solutions from the start

Walraven was established in 1942. Our founder, the great-grandfather of our current CEO, was an inventor with a love for simple and smart solutions. And now, more than 75 years later, we are a globally active company in the installation industry, committed to develop simple, yet smart product systems. With our wide product range and expert advice, we can provide complete solutions for any project, no matter how large or complex.

Walraven. The value of smart.

Turn down the volume of buildings

As more building users are disturbed by the mechanical vibration and vibration-induced noise originating from mechanical equipment, building owners and facility managers have an increasing awareness of the issue and a desire to prevent vibration.

As a result, the HVAC sector has become more attentive to the acoustic design of mechanical equipment. System designers pay more attention to the acoustic performance of the products they specify, while manufacturers stress the importance of correct installation. Onsite, installers aim to prevent noise and vibration from travelling through piping, conduits and ductwork.

Despite the increased focus on anti-vibrational measures, building users still often express discomfort regarding the mechanical vibration in buildings.

What is vibration?

In its simplest form, vibration is a mechanical phenomenon where oscillations occur about an equilibrium point. Vibration can be desirable, for example, in the case of a motion of a guitar's string or in the movement of a loudspeaker's membrane. In many cases, however, vibration is undesirable, wasting energy and creating unwanted noise. Typical examples of unwanted vibration include the vibrational motion of engines, or other mechanical devices and equipment in operation.

What are the most common sources of vibration in buildings?

HVAC equipment that is rigidly attached to a slab, wall, or ceiling can transmit vibration into the supporting structure and cause highly undesirable levels of structure-borne noise. This noise can travel far and can be heard throughout the building. Just like equipment, piping, conduits, and ductwork can act as transmitters of structure-borne noise if they are rigidly connected to vibrating equipment.

What are the consequences of vibration?

Unresolved vibration can cause problems affecting both the building and its users. These effects include, for example:

- creating discomfort for people
- reduced safety of those near the vibrating equipment
- negative consequences to the structure of the building
- increased maintenance requirements of equipment
- decreased lifetime of equipment
- incorrect operation of equipment
- violation of regulatory requirements

How to resolve vibration?

Isolating the source of vibrations from its supporting structure by using resilient devices, for example, isolators, is typically the most efficient approach to eliminate vibration. Carefully selected vibroacoustic isolators need to be placed, where possible, directly in between the mounting structure and the equipment that produces unwanted vibration. The isolators then can effectively absorb up to 99% of excess vibration produced by the equipment.

It is worth noting that correcting a noise or vibration matter can be way more costly than tackling the challenge before the installation of the equipment. The cost of correction can include the time required to coordinate the investigation, direct payments to the retrofitting contractor and the possible compensation paid to the building users filing complaints. Therefore, one should always aim to prevent vibration and noise problems instead of correcting them. The negligible extra cost for prevention (usually about 1% to 2% of the total HVAC system cost) is money well spent compared to the second-best alternative, which is correcting the existing situation.

Isolating vibrating equipment from structural building components, such as slabs, walls, and ceilings, is essential for controlling vibration and structure-borne noise transmission. There are many types of isolators available for HVAC equipment, and the most effective selection for each piece of equipment should be considered.

Transmission of airborne noise in a building

Transmission of structure-borne noise in a building

What information...

is required to select the right isolator?

To select the correct isolator, one must have an overview of the vibration situation at hand.

Below are some of the key factors that influence the selection of the isolator:

■ Specifications

You need to check the type of equipment to be isolated together with its dimensions, structural attachment points and location within the building. Other considerations include the installation and foundation requirements as well as the specifications, if any of the bolt and hole sizes for securing the equipment.

■ Location of equipment

The location of the equipment within the building requires further investigation. You need to know where the machinery is located and what its structural support is. For example, is the equipment placed on a grade slab in a basement or on the top of the roof?

■ Vibration excitation of the equipment

Rotational frequency forces and couples are important considerations here. The forces and couples caused by reciprocating masses can influence the isolation requirements.

■ Type of building

The type and use of the building can have an important impact on the choice of the isolator. Different building types like hospitals, apartment complexes, entertainment centers or industrial facilities are used for different purposes and consequently have different isolation requirements.

■ Environmental considerations

Whether the equipment is placed indoors or outdoors can make a big difference but under all circumstances you need to consider environmental factors such as the degree of corrosivity and the minimum and maximum ambient temperature near the machinery.

■ Special requirements

Last but not least, you need to check if there are any special requirements. Think about electrical, tubing, piping or ducting connections that might modify the mechanical response of the mounting system. Other special requirements may include externally applied forces or moments; minimum or maximum clearance requirements between equipment and foundation; alignment requirements; or dynamic loads.

Isolated pipelines prevent vibration and noise transmission to the structure of a building

Wide range of isolators

+ High performance

+ Made in EU

+ Wide range of applications

+ Digital product data & BIM Models

Typical applications

Where can Walraven VibraTek® products be used?

VibraTek – Typical applications

- 1 Heat pumps
- 2 Outside AC splits
- 3 Acoustic ceilings
- 4 Backup power generators and cogeneration plants
- 5 Suspended piping systems
- 6 Pumps
- 7 Compressors
- 8 Ventilation ducts
- 9 Rooftop chillers, refrigeration and air handling units
- 10 Inline fans and equipment
- 11 Industrial processing machinery

How to evaluate the suitability of an isolator?

Vibration can be isolated or reduced to a fraction of the original force with isolators placed between the equipment and the supporting structure

The simplest way to determine vibration transmission to the structure is to use static deflection and vibration isolation efficiency charts available in the Walraven VibraTek product documentation.

Load-displacement chart

Isolation efficiency chart (see page XX for larger format)

First, determine the static deflection of an isolator at a given load. Then, plot the deflection on the isolation efficiency chart to determine the degree of isolation for the given application

The Walraven VibraTek® product range

The Walraven VibraTek product line consisting of rubber and metal vibroacoustic isolators is a tailor-made solution to eliminate vibration problems in HVAC installations. Our isolators reduce the vibration transmitted by the equipment and ensure the safety and comfort of people and their surrounding environment by reducing harmful noise and vibration to the minimum. In addition, we can combine VibraTek isolators with Walraven pipe fixings, rail support systems and concrete anchors to provide you with a complete engineered solution from one partner.

MS-M Spring Mount

Compact spring isolator for light equipment

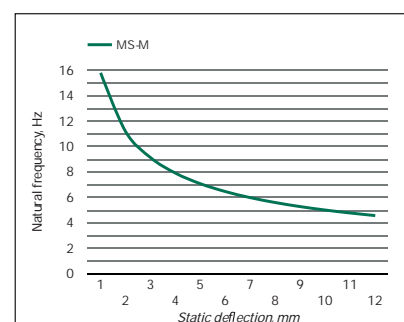

Features and Benefits

- Low-rise spring isolator with M8 external thread for light equipment or tight spaces
- Recommended for machinery with working speeds above 1000 RPM
- Steel frame attached to spring mechanically with metal rivets
- Surface treatment: zinc-plated

Walraven VibraTek®

MS-1 Spring Mount

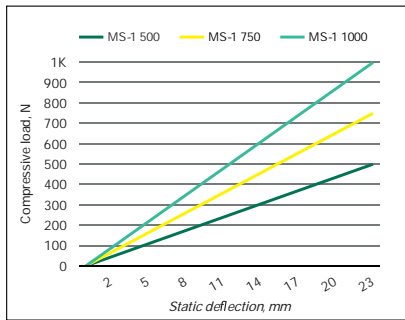

High performance spring isolator for light equipment

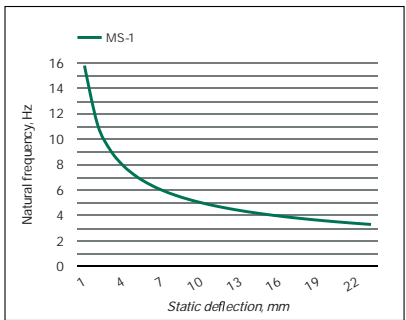

Features and Benefits

- Recommended for equipment with low working speeds, from 700 RPM and above
- Ribs in the metal base provide increased stiffness
- Slot holes facilitate positioning and anchoring to the base material
- Epoxy powder-coated base, caps and springs provide increased resistance to corrosion

MS-1X Spring Mount

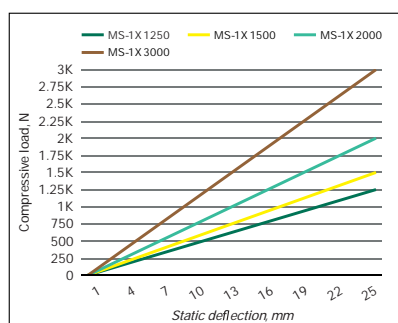

High performance spring isolator for medium to heavy equipment

Features and Benefits

- Recommended for equipment with low working speeds, from 600 RPM and above
- Flexible internal filler prevents debris and solid elements entering and damaging the spring under load
- Ribs in the metal base provide increased stiffness
- Slot holes facilitate positioning and anchoring to the base material
- Epoxy powder-coated base, caps and springs provide increased resistance to corrosion

Walraven VibraTek®

MS-1X-CBL Spring Mount

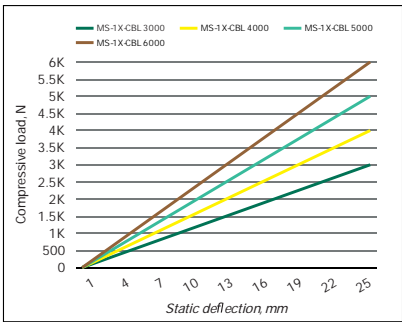

High performance spring isolator for use with A-L1 welding bracket and concrete inertia base frames

Features and Benefits

- Recommended for machinery with low working speeds above 600 RPM
- Flexible internal filler prevents debris and solid elements entering and damaging the spring under load
- Ribs in the metal base provide increased stiffness
- Slot holes facilitate positioning and anchoring to the base material
- Epoxy powder-coated base, caps and springs provide increased resistance to corrosion

Walraven VibraTek®

MR-B Rubber Mount

Bell-shaped elastomer isolator for isolation of equipment and machinery

Features and Benefits

- Ideally suited for machinery with radial vibration (as opposed to axial) and prone to sudden or pronounced starts and stops
- Recommended for machinery with working speeds above 2500 RPM, providing a degree of vibration insulation from 75% to 80%
- Metal and rubber parts can be separated for recycling

Load-displacement charts

MR-L Levelling Mount

Rubber mount with M8 connection for equipment isolation and levelling

Features and Benefits

- Rubber isolator with DIN 934 nuts and DIN 9012 washers included in delivery for mounting and levelling equipment
- Simple to install and does not need to be fixed to the supporting structure
- Recommended for machinery with working speeds above 2500 RPM, providing a degree of vibration insulation from 75% to 80%
- Metal and rubber parts can be separated for recycling

HS-1 Spring Hanger

High performance spring isolator for light suspended loads

Features and Benefits

- Simple to install and does not need to be fixed to the base material
- Recommended for machinery with low working speeds above 700 RPM
- Rubber spring base cup prevents contact between housing and the spring
- Epoxy powder-coated housing, cap and spring provide increased resistance to corrosion

See Product Data Sheet for further technical information.

HR-1 Rubber Hanger

Rubber hanger for isolation of suspended ventilation and AC systems

Features and Benefits

- Small footprint allows placement in compact spaces
- Simple to install and adaptable to a sloping roof or ceiling, part of the metal housing swivels

Load-displacement charts

Walraven VibraTek®

SA-1 Silent Absorber

Silent rubber absorber for isolating metal to metal contact

Features and Benefits

- A versatile viscoelastic rubber absorber for preventing metal-to-metal contact in joined or fastened surfaces
- Prevents transmission of vibration and noise
- With $\varnothing 8\text{mm}$ hole for use with M8 threaded rods
- Simple installation

Specifications and Packaging

Part No.	Dimension	Max. Deflection (mm)	Min. load (N)	Max. load (N)	Min. optimal load (N)	Max. optimal load (N)	H	h	B	d1	Ø

See Product Data Sheet for further technical information.

SA-2 Silent Absorber

Silent rubber absorber for isolating metal to metal contact

Features and Benefits

- A versatile viscoelastic rubber absorber for preventing metal-to-metal contact in joined or fastened surfaces
- Prevents transmission of vibration and noise
- With $\varnothing 8\text{mm}$ hole for use with M8 threaded rods
- Simple installation

Specifications and Packaging

See Product Data Sheet for further technical information.

SA-3 Silent Absorber

Silent rubber absorber for isolating metal to metal contact

Features and Benefits

- A versatile viscoelastic two-piece rubber absorber for preventing metal-to-metal contact in joined or fastened surfaces
- Formed of two rubber parts which fit into each other, making it is suitable for various fixing plate thicknesses
- Prevents transmission of vibration and noise
- Ideal isolation of HVAC equipment
- For use with M8 threaded rods
- Simple installation

SB-MM Silentblock

A rubber silentblock with two external threads

Features and Benefits

- A universal rubber absorber, ideal for use with all kinds of elastic suspension or mounting of equipment
- Ideal for use with machinery and equipment mounted on metallic surface
- Available in five configurations: (1) SB-MM with two external threads, (2) SB-MF with one external and one internal thread, (3) SB-FF with two internal threads, (4) SB-M with one external thread and a rubber base, and (5) SB-F with one internal thread and a rubber base
- For use in compression only

Walraven VibraTek®

SB-MF Silentblock

A rubber silentblock with an external and internal thread

Features and Benefits

- A universal rubber absorber, ideal for use with all kinds of elastic suspension or mounting of equipment
- Ideal for use with machinery and equipment mounted on metallic surface
- Available in five configurations: (1) SB-MM with two external threads, (2) SB-MF with one external and one internal thread, (3) SB-FF with two internal threads, (4) SB-M with one external thread and a rubber base, and (5) SB-F with one internal thread and a rubber base
- For use in compression only

SB-FF Silentblock

A rubber silentblock with two internal threads

Features and Benefits

- A universal rubber absorber, ideal for use with all kinds of elastic suspension or mounting of equipment
- Ideal for use with machinery and equipment mounted on metallic surface
- Available in five configurations: (1) SB-MM with two external threads, (2) SB-MF with one external and one internal thread, (3) SB-FF with two internal threads, (4) SB-M with one external thread and a rubber base, and (5) SB-F with one internal thread and a rubber base
- For use in compression only

PR-T Rubber Tile Pad

A versatile rubber tile pad for general vibroacoustic isolation applications

Features and Benefits

- Ideal for use as an elastic isolating support for equipment and metal structures
- Supplied as a mat of 64 blocks (8x8) joined by a membrane
- Individual 50x50mm pieces can be easily cut to form required support shape
- Transforms to elastic base support when used with a hexagon head screw
- Reusable in the event of machine relocation
- Simple to cut and install

The suitability of the product indicated in the table above is determined by the combination of the typical disturbing frequency and the weight of the device, and the elasticity module of the isolator.

Walraven VibraTek®

*Vibration isolators for
equipment and systems
in buildings*

Technical Support and Advice

Our **Technical Support Team** is ready to guide you through the selection process of the correct isolator. We will ask you the right questions to determine the circumstances of the application, perform relevant calculations and recommend the most effective Walraven VibraTek® solution.

To find out how we can support you,
visit walraven.com/int/vibration-isolation.

Find out how we can support you

Would you like to find out more about any of the solutions described in this brochure?

Or would you like to discuss how we could help you find the best possible solution for your project? Get in touch today!
