

Certificate

J. van Walraven Holding B.V. declares that

all metal products and parts within the

BIS UltraProtect® 1000 system

can successfully withstand a

1000 hours salt spray test

The salt spray test is a worldwide standard accelerated corrosion test. The corrosiveness of our products is determined by salt spray tests according to ISO 9227. All metal products and parts in the BIS UltraProtect® 1000 have surface treatments that can withstand at least 1000 hours* salt spray test according to ISO 9227. Walraven subjects its products on both accelerated corrosion tests and exposure to the exterior to continuously improve the resistance to corrosion of its products.
